

Professional features in a unit unmatched in reliability and value

Workhorse units that exceed professional standards for rotary floor machines, the Profi™ Floor Machine combines reliability, performance, and economy. Whether you are using brushes or pads, cleaning hard floors or carpet, the Profi™ Floor Machine provides true flexibility for a variety of applications. Designed from the ground up to meet today's demands of professional-level floor care, a heavy-duty motor is mounted on a rugged, one-piece rotationally-molded base. The handle is height adjustable for maximum comfort and productivity.

These 175 r.p.m. floor machines employ a specially selected motor that addresses the low voltage problems found in many facilities. The motor does so by consuming less power while still operating at a superior level and with longer motor life. This unit comes complete with the pad holder.

DURABLE DESIGN

The unit uses unique safety handle, which is designed for durability and operator efficiency by allowing the machine to be easily heeled during use.

RUGGED

A ribbed, double-walled rotationally-molded base stands up to the rigors of everyday use.

DISC PADS

The PF8670 comes standard with a pad holder and can be fitted with appropriate pads for operations including scrubbing, buffing, and stripping.

VARIABLE HEIGHT

Adjustable cam-lever allows height to be set at the operator's comfort level.

PRODUCT SPECIFICATIONS	
MODEL	PF8670
CATALOG NUMBER	68670
SIZE (W X D)	20" x 26"
WEIGHT W/OUT BRUSH	85 LBS
